corrateg®
PASSION OF CYCLING

POWER FOR MIND, BODY & SOUL

It begins with that first pedal stroke –
it becomes strength, balance and health.
And eventually, it becomes a way of life –
a source of joy and a sense of community.
Cycling is more than just a sport.
Cycling is a way of life.

And that's what corratec is all about.

2013
LAUNCH OF E-BIKES
AS ONE OF THE FIRST
MANUFACTURERS IN GERMANY

Since 1990, corratec has approached bicycle design not from the perspective of interchangeable components, but with a focus on specific usecases. For the 2027 model year, this means: not just showing which motor, gear system or battery is fitted, but explaining why a frame is designed in a particular way, why a particular geometry rides the way it does, and what difference a specific feature makes in everyday use – providing a solid foundation for the sales pitch in specialist shops.

Developed in Bavaria, built in Romania: that is secret to corratec's success. At its own factory in Timisoara, bikes are manufactured for corratec and other well-known brands such as woom. 200 employees work across 30,000m² of production space to bring sporting dreams to life and mobility solutions for the whole of Europe – in corratec's tried-and-tested quality.

**We wish you every success and
enjoyment with corratec bikes in 2027.**

OWNERS & MANAGEMENT
Cielo & Konrad Irlbacher

The 2027 theme – POWER FOR MIND, BODY AND SOUL – encapsulates what corratec has always stood for: bikes that get people moving. On the road, off-road, with or without electric power.

This means we design every bike with its intended use in mind. We explain which technical detail serves which purpose: why a frame is constructed in a certain way, why a particular geometry rides the way it does, and why a specific feature makes a noticeable difference in everyday use.

In this way, we provide specialist retailers with talking points for sales conversations that go beyond technical specifications, making us a reliable partner for everyone who not only sells bikes but also advises people on finding the right one for them.

This order book is designed to be a tool for precisely this purpose and to highlight corratec's key features: whether it's our frame finishing, One-Piece-Downtube, iLink kinematics or the LIFE concepts ... every detail is designed to deliver **Power for Mind, Body and Soul**.

THE CORRATEC BRAND

Developed and designed in Bavaria –
tested where bicycles are put to the test.

corrateg is a traditional Bavarian company
in the very best sense of the word:

owner-managed, innovative and quality-conscious.

Its roots in Raubling are a defining feature: Alpine
climbs, descents, gravel, commuter routes and city
traffic are all close at hand and provide real-world
testing conditions.

CREATED
IN BAVARIA
SINCE 1990

Tradition

represents 35 years' experience

Innovation

stands for clear solutions

High quality

stands for materials, finish and quality control

Passion

represents our commitment to providing
customers with the very best possible bike

corrateg Charity Mission –

**Our ethos is reflected
not only in our products,
but also in our sense of
responsibility.**

corrateg is a family-run business –

and understands that responsibility extends beyond the product.

The corrateg Charity Mission supports children and people in need
through education, medical care and specialised aid
projects in San Teodoro, the Philippines. This aid project is part of the
brand: when we talk about mobility, health and quality of life, we are
also demonstrating our commitment to society. corrateg stands not
only for a passion for cycling, but for a brand with heritage, values
and a long-term vision.

HOW TO SELL CORRATEC

For specialist retailers,
what counts is what can be explained to customers at the point of sale.

corrateg bikes are not merely the sum of their components, but the technical decisions behind them. Customers can find Bosch, Shimano or SRAM elsewhere too. **The difference lies in frame construction, geometry, workmanship, integration, safety and service – backed by decades of experience and attention to detail.**

corrateg deliberately focuses on specialist high-street retailers: advice, test rides, customisation and personalised support safeguard the brand's value and underpin price stability. Quality is made tangible through meticulous workmanship, controlled production and improved service processes. Awards, test results and racing successes reinforce these arguments, but do not replace them. **'How to sell corrateg' means: showcase the features, explain the benefits, and arrange a test ride.**

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Don't sell to customers based on components, but on 'Why is this bike different?'**
- **Quality: visible craftsmanship, combined with controlled production and improved service.**

FRAME FINISHING

The first visible sign of
quality: when aluminium
looks as though it were
cast in a single piece.

Frame finishing is one of the strongest selling points at the point of sale, as the quality is immediately apparent. corrateg refines frames using TIG welding, grinding, filler material and priming. This makes the transitions appear smoother and gives aluminium frames a significantly higher-quality finish. Retailers can point out the frame junctions, head tube, down tube and welded areas directly and compare them with competitors' products.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **A higher-quality finish thanks to sanded, filled and primed transitions.**
- **Purpose: to highlight the difference in quality across the surface, particularly next to volume-based brands.**
- **POS tip: Let customers directly compare the frame joints, down tube, head tube and transitions.**

TOP
2

corrateg BOW frame technology

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Greater propulsion:** High stiffness in the drive area supports direct power transmission.
- **More control:** Targeted load distribution stabilises the frame during accelerations, cornering and on varying terrain.
- **More comfort:** Tailored self-damping can reduce vibrations and minor impacts.
- **Greater brand recognition:** The distinctive silhouette makes corrateg instantly recognisable at the point of sale.
- **Greater credibility:** Decades of experience in racing are incorporated into the further development of the production frames.

An iconic design with practical benefits.

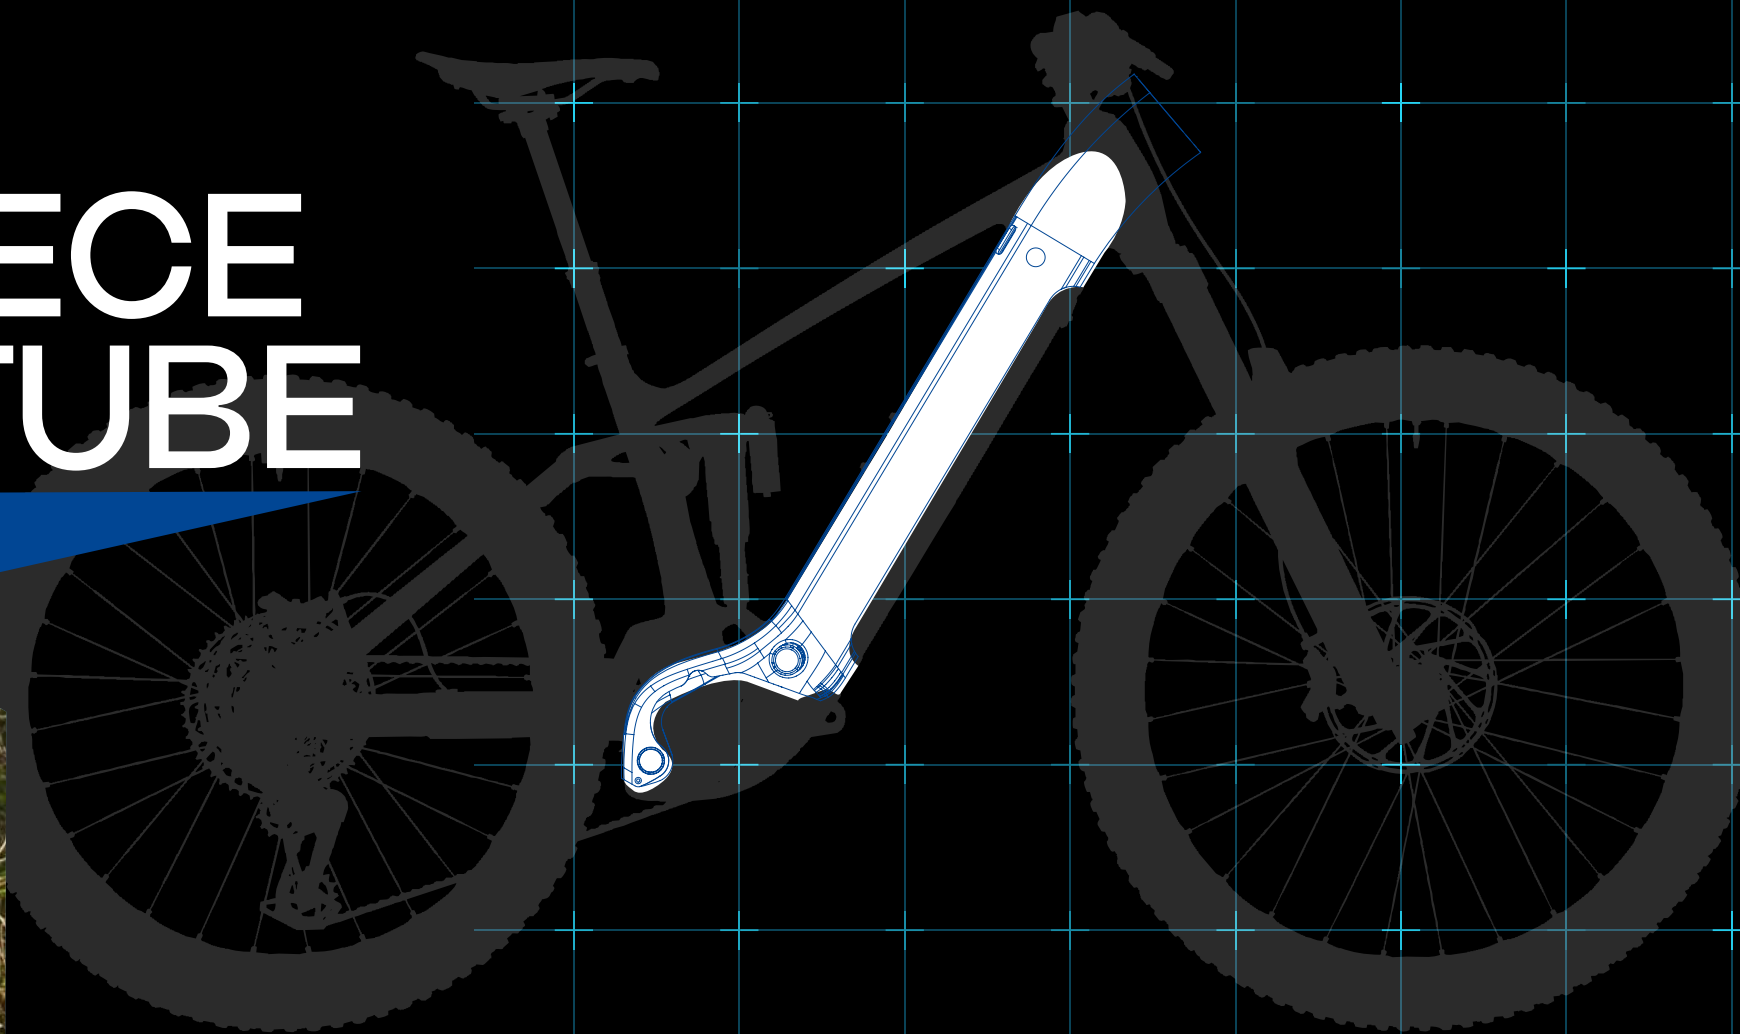

The corrateg BOW frame shape is one of the brand's most distinctive features. The curved silhouette combines a unique design with targeted load distribution within the frame. High stiffness around the bottom bracket promotes direct power transfer, whilst defined flex zones help to reduce vibrations and minor impacts. The result is a riding experience that combines propulsion, stability and controlled comfort.

BOW

BOW
IS THE WORLD
CHAMPION!

ONE-PIECE DOWNTUBE

For maximum
rigidity and
stability

Greater stiffness, cleaner integration and a high-quality, one-piece frame.

The One-Piece Downtube combines frame construction, design and function. Depending on the model, corratedc opts for a One-Piece Downtube construction rather than composite, complex welded solutions. This increases structural stiffness, supports clean power transmission and enables an integrated battery and motor mount. For riders, this results in a more solid, controlled riding experience – particularly on e-bikes with motor power, battery weight, luggage and higher system loads. For retailers, the One-Piece Downtube is visible proof of corratedc's frame expertise: greater stability, greater integration, a higher-quality appearance and a clearly discernible difference from a purely component-based approach.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- One-piece construction for maximum safety and stability
- Loss-free power transmission for a unique riding experience
- Maximum stability even under heavy use
- Innovative cable routing protects cables and guides without kinks
- Particularly durable as no welded seams are required
- Exclusive to corratedc: High-Tech from Upper Bavaria

TOP 4 KINEMATIC GEOMETRY

Geometry is not just a figure in a table, but a reflection of the bike's intended use.

A road bike needs efficiency and speed.

A gravel bike must provide confidence on varying terrain.

An E-MTB demands control, traction and stability under high motor power.

This is precisely why, at corratec, geometry is not an abstract figure in a table, but the precise reflection of the bike's intended use.

For specialist retailers, this sends a clear message:

corratec does not develop one-size-fits-all geometries, but rather bikes tailored to specific segments.

Each model is designed for the specific use it was built for.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater control thanks to ride-specific geometry rather than a standard platform.
- Greater climbing stability on the e-MTB thanks to an optimised riding position and weight distribution.
- Greater efficiency and traction on full-suspension bikes thanks to optimised kinematics.

HUB-MOTOR

TOP 5

The drive system as an integrated solution – quiet, direct and ideal for urban mobility.

The hub motor complements the corratec range where simple, lightweight and quiet mobility is required. Whilst mid-drive motors excel under heavy loads, in sporty riding and on long climbs, a hub motor scores highly with direct assistance at the wheel, a less complex drivetrain and a natural riding experience.

For specialist retailers, it is important to understand the context: the hub motor is not a one-size-fits-all solution, but a targeted answer for city riding, commuting, flatter terrain and customers who want simple operation and low maintenance. The key point is: choose a drive system suited to the intended use – do not judge it solely on power output.

An important guideline for specialist retailers:

don't sell based solely on price, but on the intended use.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater simplicity thanks to direct support on the wheel
- Quiet and straightforward: with the motor switched off, the bike rides just like a regular bike
- Suitable for everyday use in town or the local area, for short to medium journeys, commuting and on flatter terrain.
- Lightweight: Can easily be carried down to the cellar or up to the second floor of an older block of flats

TOP 6

Efficient going uphill, active going downhill.

iLink is the rear suspension kinematics system developed by corrateg for full-suspension mountain bikes. Pivot points, lever ratios and shock mounting are tuned so that the rear triangle remains as stable as possible whilst pedalling, whilst still allowing its suspension to respond sensitively on the trail.

The technical benefit lies in the balance between anti-squat and anti-rise: Uphill, unwanted bobbing is reduced, ensuring that more pedalling power is transferred to propulsion. Downhill, the suspension remains active, keeping the rear wheel on the ground for longer and improving traction, comfort and control.

For specialist retailers, iLink therefore offers clear riding benefits: more efficient pedalling on forest tracks and climbs, better grip on roots and ruts, and a predictable suspension system on fast descents.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater propulsion thanks to reduced bobbing motion whilst pedalling.
- Greater traction and control thanks to an actively working suspension system.
- Sales pitch: Don't just explain the shock absorber; explain how the frame, pivot points and kinematics work together.

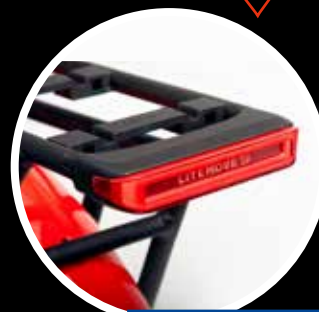

SAFETY

Safety is a matter of many details

Safe riding and control of the bike, combined with the safety features inherent in the product, are the top priorities in all surveys on what matters most to customers when it comes to cycling. corrateg has a wide range of features to offer in this regard.

BRAKE LIGHT

The brake lights make it easier for following traffic to recognise when the vehicle is slowing down – particularly in town, in traffic, at dusk and in stop-and-go traffic.

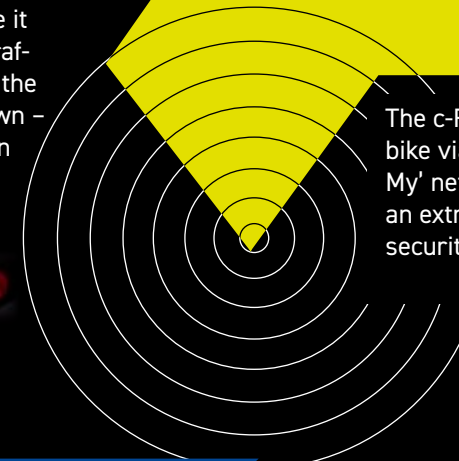

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater visibility thanks to brake lights.
- Greater protection against theft and improved chances of recovery thanks to C-Finder.
- More practicality for everyday use thanks to a securely attached luggage rack and accessory systems.

C-FINDER

The c-Finder tracks the bike via Apple's 'Find My' network and adds an extra layer of digital security to the lock.

LUGGAGE RACK

The four-point luggage rack with MIK or MIK-HD technology can carry heavier loads than its competitors and provides noticeably more stable support for baskets, bags or touring luggage.

This provides strong selling points:
Safety whilst driving,
peace of mind when
parking, stability when
loading.

Third place in the general classification: Giro d'Italia

Third place in the general classification: de Suisse

UCI: National Champion (CH), points race (track)

ROAD

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater speed thanks to aerodynamic frame and cockpit integration.
- Greater efficiency thanks to a stiff carbon structure and precise geometry.
- Sales approach: focus on explaining frame performance rather than listing components.

ROAD

Speed starts with the frame.

Road bikes are efficiency in its purest form. Riding position, tube profile, cable routing, cockpit, weight and stiffness all determine how directly a bike accelerates, maintains speed and handles on descents. corratec road bikes therefore start with the frame. The road bike range combines sporty geometry, high-quality carbon construction, aerodynamic integration and a distinctive design language. The CCT EVO embodies this philosophy: frame shape, cockpit, fork, cable routing and axle areas all contribute to speed. For retailers, the approach is clear: don't just sell groupsets or wheelsets, but frame performance – speed, precision and efficiency as a complete system.

ROAD FEATURES

Aerodynamics, stiffness and weight as clear selling points.

The features of a road bike can be explained in terms of three key aspects: aerodynamics, stiffness and integration. Aerodynamics are achieved through the overall system comprising tube shapes, the cockpit, internally routed cables, an aero fork, minimised gaps and sealed bottom bracket areas. Stiffness ensures that the bike responds immediately when you start pedalling and remains precise through fast corners.

High-quality carbon and Bow DNA combine propulsion with control.

Integration is the visible premium selling point: a clean cockpit, a tidy frame shape and clean lines.

For retailers, this means: less aerodynamic drag, better power transfer, a higher-quality look – explain this as a logical chain of benefits.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Aerodynamics achieved through the cockpit, fork, cable routing, axle areas and tube shapes.**
- **Stiffness achieved through the carbon frame, Bow-DNA and reinforcement in bottom bracket/head tube areas.**
- **Integration as a visible premium selling point at the point of sale.**

Aero fork
perfectly shaped and aerodynamic

ROAD

Integration
A clear premium feature:
- a clean cockpit
- a neat frame design
- clean lines

Attention to detail
means minimal aerodynamic drag and minimal weight.

GRAVEL

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater versatility thanks to its geometry, which is suited to road, gravel and touring.
- Greater transportability thanks to attachment points for bottles, bags and luggage.
- Closer to the market thanks to a regionally authentic gravel DNA in the Alpine foothills

Built for the terrain between road, gravel and adventure.

Gravel is a perfect fit for corratec because the brand's home region acts as a natural testing ground for this category. Around Raubling, roads, gravel tracks, farm tracks, lakeside routes, pre-Alpine climbs and long touring sections all come together. It is precisely here that you can see what a gravel bike needs to deliver: fast enough for tarmac, stable enough for gravel, comfortable enough for long distances and versatile enough for carrying luggage.

A corratec gravel bike is not simply a road bike with wider tyres, but a platform in its own right. It must handle different loads, cope with different terrains and cater for different usage scenarios. The rider expects speed, but also control. Lightness, but also robustness. Sportiness, but also transportability.

For specialist retailers, gravel is a product category with great potential. Customers often come in with vague ideas: all-road, bikepacking, commuting, after-work rides, the Alpine foothills, forest trails, touring. The task is to narrow down the intended use. corratec offers clear selling points for this: sturdy and lightweight frames, clearance for wide tyres, mounting points, comfort-oriented geometry and a design language that retains a sporty feel.

GRAVEL- FEATURES

Durability, comfort and mounting points are what make gravel bikes marketable.

The gravel features must clearly demonstrate why these bikes are capable of more than a traditional road bike. The frame is designed to be sturdy yet lightweight, enabling it to handle varying terrain, luggage and longer rides. Wide tyres improve grip, shock absorption and safety on gravel, whilst remaining fast enough for tarmac.

A key selling point is transportability. Additional mounting points on the frame and fork allow for bottle cages, panniers, mudguards or luggage solutions. This transforms the gravel bike from a sports bike into a platform for commuting, bikepacking and weekend tours.

The geometry is also crucial. Gravel Performance, All-Road and touring-oriented variants need to be explained differently: sportier and more responsive for fast laps; more balanced for mixed terrain; and more durable and better suited for carrying luggage and everyday use. This enables the retailer to clearly distinguish between different customer types.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater control thanks to wide tyres, a robust frame and optimised geometry.
- Greater versatility thanks to mounting points for everyday use, touring and bikepacking.

Additional mounting points on the frame and fork allow for bottle cages, bags, mudguards or luggage solutions. This transforms the gravel bike from a piece of sports equipment into a platform for commuting, bikepacking and weekend rides.

MTB

MTB

Racing DNA, a bow-shaped silhouette and control on every trail.

Mountain biking is deeply rooted in corratec's DNA. For decades, corratec bikes have been a fixture in competition, on trails and on technical terrain. The Bow frame shape is more than just a design feature. It is a recognisable trademark that combines stability, power transfer, inherent damping and a distinctive look.

This DNA is particularly evident in the MTB sector. corratec bikes aren't designed solely for the showroom, but with real-world challenges in mind: climbs, roots, braking bumps, steep ramps, rapid changes of direction and technical descents. The Mountain Bike Racing Team provides valuable feedback on this. Successes in Eliminator and cross-country racing demonstrate that these bikes are designed for serious competition.

For retailers, the MTB range presents an opportunity to position corratec as an alternative to well-known mass-market brands. The selling point isn't "just another good mountain bike", but rather: a distinctive frame design, a visible racing heritage, high-quality frame construction, precise geometry and features that enhance propulsion and control. corratec MTB is therefore aimed at riders who aren't just looking for any old bike, but for a brand with recognition, racing credentials and a distinctive technical identity.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater recognisability thanks to the bow-shaped frame design.
- Greater control thanks to race-proven geometry and frame stiffness.
- Greater credibility thanks to team testing, World Cup and World Championship credentials.

MTB FEATURES

Bow-DNA, carbon expertise and iLink make performance understandable.

The key MTB features: Bow DNA, frame performance and suspension logic. The Bow frame shape is characterised by a distinctive silhouette, high stiffness around the bottom bracket, direct power transfer and targeted self-damping.

On full-suspension bikes, iLink technology is also incorporated. The bearing and lever system is designed to combine efficient pedalling with responsive suspension. In sales terms, this is easy to explain: less bobbing uphill, more traction and comfort downhill.

Further features such as composite link components, automatic suspension adaptation and high-quality carbon construction ensure lower weight, more direct handling and greater control off-road.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Bow-DNA:** greater stiffness, propulsion and recognition.
- **iLink:** greater efficiency on the climb/better traction on the descent.
- **Carbon/Link/Integration:** lower weight, more precise response, a premium overall feel.

THE E-BIKE
PIONEER FROM
BAVARIA.

E-MTB

E-MTC

E-POWER

E-CITY
TREKKING

corratedec Life

E-MTB

E-MTB

More engine power requires greater expertise in chassis and geometry.

A modern E-MTB isn't simply a mountain bike with a motor. The extra power fundamentally changes the bike's handling. More torque, a heavier battery, higher speeds uphill and longer rides place different demands on the frame, geometry, brakes, tyres and suspension. That is precisely why corratec develops e-MTBs as a category in their own right.

With E-MTBs, geometry becomes a safety issue. When a motor is providing high levels of assistance on steep gradients, the front wheel must remain firmly on the ground. A suitable saddleposition, a sensible wheelbase and a stable frame platform help to ensure traction and control. The rider should not have to fight against the bike, but should be able to make use of the assistance.

Added to this is the frame integration. Battery, motor, cables, shock absorber, suspension and components must all work together seamlessly. Features such as the One-Piece Downtube, internally routed cables, c-Finder and, depending on the model, automatic gear shifting not only make the e-MTBs higher quality, but also more functional. corratec E-MTBs are aimed at riders who want to tackle more elevation gain, longer rides and technical trails – but with a bike that delivers that extra power to the ground in a controlled manner.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater control on uphill sections thanks to optimised geometry for powerful motors.
- Greater stability thanks to a robust frame platform and a One-Piece Downtube.
- Greater safety and practicality for everyday use thanks to c-Finder, powerful brakes, wide tyres and clean integration.

E-POWER X-VERT

E-MTB FEATURES

Explain power, automatic transmission, geometry and integration as a system.

The E-MTB features should not be listed individually, but rather as an integrated system: motor power, battery, geometry, suspension, frame stiffness and handling all work together. This principle is particularly evident in the RS160 Automatic: powerful assistance, a full-suspension platform, Shimano Di2 automatic shifting, an 800 Wh battery, the PowerMore option and c-Finder combine to form a package designed for demanding tours and trails.

The automatic gear system takes the complexity out of riding. Especially when climbing, on varied terrain or when tired, it helps to maintain the right gear ratio efficiently. The benefit is not just convenience, but a more consistent pedalling rhythm, better concentration on the line and the terrain, and fewer operational errors.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Automatic:** greater focus on the trail and your line thanks to less effort required for gear changes.
- **One-Piece Downtube:** greater stiffness and integrated battery and motor.
- **c-Finder:** greater peace of mind when parking a high-quality E-MTB.

THE ONE-PIECE DOWNTUBE
promotes stability and integration. This is particularly important for E-MTBs, as the motor and battery mounts place high demands on the frame's structural integrity. A rigid downtube design contributes to riding precision, safety and overall quality.

E-MTB

THE AUTOMATIC GEARBOX
Takes the complexity out of driving

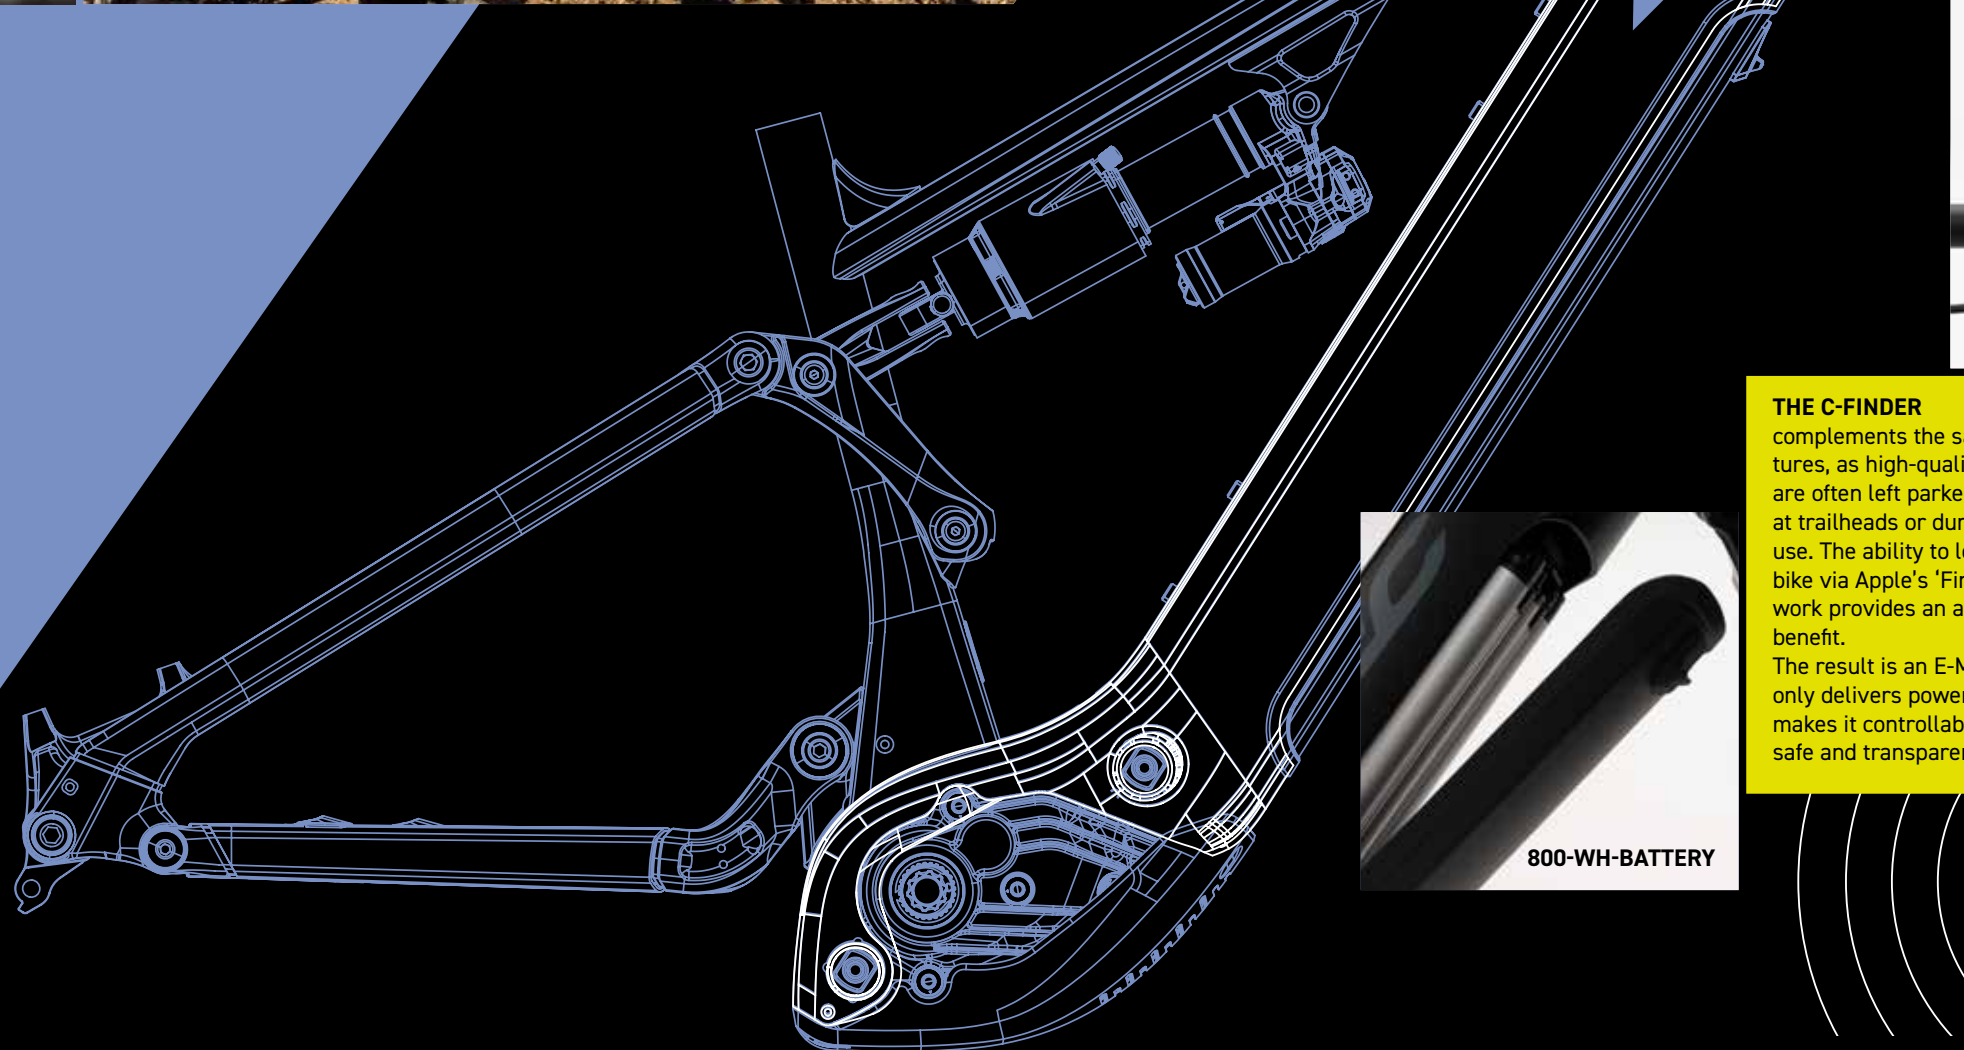

THE C-FINDER
complements the safety features, as high-quality E-MTBs are often left parked on tours, at trailheads or during everyday use. The ability to locate the bike via Apple's 'Find My' network provides an additional benefit. The result is an E-MTB that not only delivers power, but also makes it controllable, safe and transparent.

E-MTC

E-MTC

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater comfort thanks to a low step-through and an ergonomic seating position.
- Greater control thanks to wide tyres, suspension and a sturdy frame.
- Greater distinctiveness thanks to its sporty, low-step design rather than a typical city bike approach.

Mountain Cross: easy to ride, sporty character, genuine stability.

MTC represents, at corratec, the cross between an E-MTB, a trekking bike and a comfort-oriented everyday bike. It is not a classic city bike, but a Mountain Cross concept: more stable, sportier and better suited to off-road riding than a pure comfort E-bike, yet more accessible and better suited to everyday use than an uncompromising E-MTB.

This positioning is particularly strong in the Wave and Fully models. A low step-through makes getting on and off, whilst wide tyres, suspension, robust frame architecture and powerful Bosch assistance provide the capacity for mixed terrain. MTC thus appeals to customers who want a comfortable ride but do not wish to compromise on stability, traction and a sporty range of uses.

The difference compared to the competition lies in the clear design philosophy. Many low-step bikes are designed primarily for urban use. corratec takes a sportier approach to the low-step design: as a mountain-cross platform featuring a high-quality frame, a One-Piece Downtube, c-Finder, powerful motorisation and, depending on the model, full suspension. For specialist retailers, the MTC is an ideal bridge product. When a customer says, 'I want to get on the bike easily, but I don't want a pure city bike', that's when the MTC consultation begins.

E-MTC FEATURES

When the whole bike thinks for itself.

A low-slung frame must remain stable, even when engine power, rider weight, luggage and uneven terrain all come into play. That is why frame architecture, a One-Piece Downtube, wide tyres and suspension are key features of this category.

On the MTC FS Wave, the comfort factor comes to the fore particularly strongly. Full suspension at the front and rear smooths out cobblestones, cycle paths, gravel and rougher surfaces. This noticeably relieves strain on the back and joints and gives riders greater confidence over longer distances.

The Bosch Performance Line CX Smart System drive, delivering up to 120 Nm and featuring an 800 Wh battery, provides plenty of power for climbs, tours and headwinds.

The c-Finder enhances everyday safety. A luggage rack, brake light and accessory options also make the MTC more suitable for everyday use than a purely sporty e-MTB.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Greater comfort thanks to full suspension and wide tyres.
- More power thanks to the Bosch CX Smart System with high-level assistance.
- Greater safety for everyday use thanks to c-Finder, a luggage rack and a brake light.

Specialist retailers can therefore promote the MTC by asking three questions:

Do you need an low-threshold way to get started?

Do you want more power reserves than a city bike offers?

Do you also ride on routes where comfort and traction are important?

E-CITY TREKKING

E-CITY
TREKKING

For routes that need to be operational every day.

Trekking is the category of reliable mobility. Here, it's not about extremes, but about journeys that have to work every day: commuting, shopping, day trips, cycle paths, city streets, country roads, daily commutes and weekend getaways. A corratec trekking bike must therefore be comfortable, stable, well-equipped and low-maintenance.

The difference compared to sportier categories lies in the priorities. Trekking bikes prioritise everyday safety, riding comfort, load-carrying capacity, lighting, mudguards, luggage racks, a centre stand and reliable drivetrain technology. At the same time, the bike should not feel sluggish. It needs sufficient power in reserve, clean geometry and a riding experience that remains comfortable even over longer distances.

The corratec Trekking range benefits from the same design priorities as the sportier categories: frame stability, integration, high-quality workmanship and purpose-built geometry. This makes the bikes appealing to customers who are looking for a reliable E-Bike for everyday use, but do not want to compromise on a high-quality frame and clear technical advantages.

For specialist retailers, Trekking is the category where customer needs become very specific: How far does the customer commute? How much luggage do they carry? How low-maintenance does the drive system need to be? Is the battery charged at home? What riding position is comfortable? It is precisely these factors that form the basis for the right recommendation.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- More practicality for everyday use thanks to comprehensive equipment and reliable components.
- Greater comfort thanks to relaxed geometry and ergonomic contact points.
- Greater value from the consultation thanks to clear questions about commuting, touring, luggage and maintenance.

E-CITY/TREKKING FEATURES

Comfort, range and low maintenance requirements as specific reasons for purchase.

The trekking features should be explained consistently using everyday situations as examples. A powerful Bosch motor helps on inclines, against headwinds and over longer distances. Large PowerTube batteries provide range for commuting and touring. A belt drive, as found on the E-Power Trekking 28 PX6 Belt Wave, reduces maintenance, runs quietly and stays clean – a strong selling point for customers who use their bike every day.

Wide tyres and front suspension improve comfort, traction and control. This is particularly noticeable on poor cycle paths, cobblestones or gravel sections, this makes a noticeable difference. The upright, comfortable riding position reduces pressure on the hands and back and provides a clear view of traffic.

Here, too, the luggage rack and lighting system are no afterthought. A sturdy luggage rack makes it easy to plan for shopping trips or commuting with luggage. The brake light increases visibility when slowing down. The c-Finder provides extra security when parking. Together, these features result in an e-bike that doesn't just get you from A to B, but helps organise your everyday life.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- Belt-driven models require even less maintenance.
- Greater range and power reserves thanks to the Bosch drive system and large batteries.
- Greater safety for everyday use: luggage rack, brake light, c-Finder and a full range of features.

For the retailer, the sequence
of steps is simple:

E-CITY

This is how trekking goes from
being a technical specification to
**practical
mobility solution.**

E-POWER EASY FEATURES

Light, straightforward, cool. Designed for the city and the surrounding flat countryside.

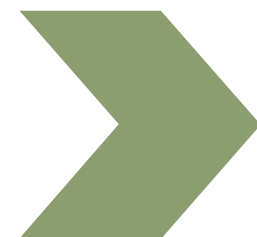

E-Power Easy doesn't fill a price gap, but rather a gap in usage: it's designed for people who want to cover short to medium distances in the city and the surrounding flat countryside easily, quietly and reliably. The system provides sufficient motorised assistance for commuting, shopping, stop-and-go traffic and everyday urban journeys – without making the bike unnecessarily heavy or technically overloaded.

The sealed hub motor provides assistance directly to the wheel. This means the chain and sprocket are not subjected to any additional strain from the motor – making the system particularly low-maintenance. Without assistance, the bike rides almost like a traditional bicycle: light, familiar and with no noticeable motor resistance. This is a noticeable advantage, particularly in everyday life – for example, when manoeuvring, parking, or when the bike needs to be carried down to the cellar, onto a train or up to the first floor. The 360 Wh battery is specifically designed for commuting, shopping and everyday urban journeys.

E-POWER EASY LIGHT
is aimed at active, eco-conscious and who are looking for a lightweight, responsive e-bike e-bike.

RIDING EXPERIENCE
Without assistance, it's almost like a classic organic bike.

E-POWER EASY COMFORT
combines a straightforward drive system with an upright seating position and practical low-step access – for greater visibility, comfortable handling and a sense of safety in city traffic.

corratec Life

VON MEDIZINERN ENTWICKELT

Your decision today.
Stay fit.

Life

Mobility starts with trust

Cycling can be more than just a sport. It can make everyday life easier, bring exercise back into people's lives, and foster a new sense of independence. Or it can simply be fun.

That's exactly why the corratec Life concept was developed. corratec's e-bike range is designed for people who want to get out and about more safely, comfortably and regularly, quite apart from sport and performance.

corrateg Life

The Life concept combines ergonomics, a sports medicine perspective and many years of engineering expertise.

In collaboration with Dr Ludwig V. Geiger, a bike has been developed to support people who are heavier, have limited mobility, suffer from joint or back problems, or have cardiovascular issues, as well as those looking to start or resume exercise in a controlled manner.

The corrateg Life translates this vision into practical technology: the low step-through frame makes getting on and off the bike easier, whilst the upright seating position takes the strain off the hands, shoulders and back. The powerful Bosch drive provides assistance precisely when one's own strength isn't enough – for example, on inclines, in headwinds or over longer distances. In this way, e-power doesn't create pressure to perform, but becomes a tool for controlled, safe exercise.

corrateg Life S

Questions for specialist retailers

For specialist retailers, this results in a clear approach to advising customers: the Life isn't explained solely in terms of the motor, battery or gears, but through real-life riding situations. How safely does the customer mount the bike? How stable do they feel when stopping? How much payload is needed for everyday use? Which riding position takes the strain off the hands, back, knees or hips? This is precisely where the difference between a standard e-bike and a corrateg Life begins.

corrateg Life

One concept – two areas of application

Life and Life S make mobility accessible once again

The corrateg Life and Life S are based on the same fundamental idea: cycling should not be overwhelming, but should make it possible for everyone to cycle. Both models combine exercise, safety and suitability for everyday use — but with different focuses.

BENEFITS OF THIS FEATURE FOR SPECIALIST RETAILERS

- **Greater safety thanks to a low step-in height**
Makes getting on and off the bike easier and reduces uncertainty for those with limited mobility, a higher body weight or after a long break from cycling.
- **Greater frame stiffness thanks to the two-piece downtube**
Depending on the model, the two-piece downtube construction ensures high stiffness, protected internal cable routing and a high-quality frame finish.
- **More practicality for everyday use: the four-point luggage rack**
Sturdy load-bearing capacity for baskets, bags and accessories via MIK or MIK-HD.
- **Greater comfort thanks to ergonomics**
SQLab saddle, ergonomic grips, adjustable cockpit, an upright riding position and wide tyres reduce pressure on the hands, back and seat area.
- **More training thanks to adjustable e-assist**
Bosch assistance enables exercise at a tailored intensity — for getting back into cycling, cardiovascular-focused exercise and group rides.

The **corrateg Life** is the health-focused model in the Life range and stands out thanks to its particularly robust, ergonomic design for cyclists with higher demands in terms of stability, comfort and overall weight. It is ideal for people who are looking to get back into cycling and ride regularly again, need more support or are looking for a bike that can carry their body weight, luggage and everyday items with ease.

The **corrateg Life S** are the compact everyday bikes in the Life range – suitable for all age groups. Their strongest selling point is the secure standing position: stop, stay seated, put both feet on the ground and set off again in a controlled manner. This makes them ideal for city traffic, short journeys, shopping, commuting and households where a bike is used flexibly. Full details of the range from page 120.

Advice that builds trust

Life and Life S are not merely furnishing products. They are consultancy products.

The key questions are:

How safe does the rider feel when getting on?

How stable is the bike when stationary?

Which seating position takes the strain off the hands, back, knees or hips?

How much payload is actually required?

Is the bike intended primarily for exercise, to make everyday life easier, or both?

IDEAL
CARDIO-
VASCULAR
EXERCISE

MENTAL
HEALTH

DR LUDWIG VINCENT GEIGER, MD
RENOWNED SPORTS MEDICINE SPECIALIST
AND DEVELOPER OF THE CORRATEG LIFE.

„The best piece of exercise equipment for a healthy life“

For Dr Ludwig V. Geiger, regular exercise is key to improving physical and mental performance.

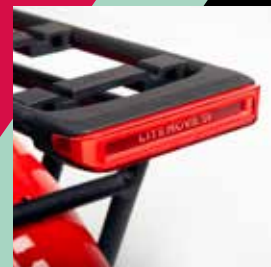

The corrateg Life has been developed to facilitate precisely this approach: low to medium intensity, easily adjustable and offering a high level of safety. People with joint problems, metabolic or cardiovascular conditions benefit in particular when exercise becomes possible again in a controlled and enjoyable way.

WITH THE LIFE, SAFETY BEGINS EVEN BEFORE YOU SET OFF.

The low step-through frame makes it easier to mount the bike, as you don't have to swing your leg high over the top tube – particularly helpful for those with limited mobility, a higher body weight or who feel a bit unsure after a long break from cycling.

Further details enhance your sense of safety in everyday life: the red brake lever clearly identifies the front brake and makes it intuitive to use. The brake light on the luggage rack makes it easier for following traffic to see when you're slowing down – in town, on cycle paths or when cycling in a group. The c-Finder complements the traditional lock by providing a sense of digital security once you've parked your bike.

THE BRAKE LIGHT ON THE LUGGAGE RACK

makes it easier for following traffic to spot when you're slowing down – in town, on cycle paths or when cycling in a group.

THE RED BRAKE LEVER
clearly identifies the front brake and makes it intuitive to use.

**HIGH-QUALITY,
SEAMLESS LOOK**

**INTEGRATED CABLE
ROUTING**

**STURDY
LUGGAGE RACK**

**STURDY
WHEELS,
WIDE TYRES**

THE CORRATEG LIFE

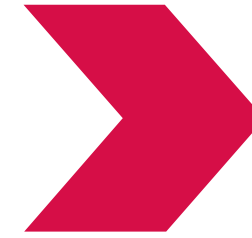

is designed to accommodate a total system weight of up to 180 kg – that is, the combined weight of the bike, the rider, clothing, accessories and luggage. This margin is particularly important in everyday use: with a higher body weight, shopping, panniers or additional load, the whole bike needs to be stable, not just the frame.

THIS SAFETY STEMS FROM A SYSTEMATIC APPROACH:

a load-bearing frame architecture, robust wheels, wide tyres, powerful brakes, a stable fork, a load-bearing luggage rack and ergonomic contact points all work together. Depending on the model, the corrateg One-Piece Downtube also reinforces this promise – with high stiffness, clean power transfer, integrated cable routing and a high-quality, seamless appearance.

More than just an E-Bike:
**The choice for
a healthy lifestyle.**

corratedec Life S

Ride safely.
Come to a complete stop.
Ride on.

Many people don't feel unsteady whilst riding, but rather when setting off, stopping, manoeuvring or dismounting.

This is exactly where the Life S comes in. The frame and seat geometry are designed so that riders can remain seated when stopping whilst still being able to reach the ground safely with both feet.

This makes an immediate difference to the riding experience: at traffic lights, before a junction, in a car park, when manoeuvring with luggage or at your front door, there's no need to slide off the saddle in a hurry or brace the bike to the side. The Life S instils confidence precisely where uncertainty arises.

GREATER SAFETY THROUGH GEOMETRY

The Life-S geometry combines a low step-through, an upright riding position and a stable ride. The bike remains easy to mount, offers a clear view and is easy to control. The upright riding position provides a clear view of traffic, reduces forward pressure and makes slow cycling in town easier. The most powerful point of sale moment: the customer stops, puts both feet on the ground – and realises the difference straight away.

MORE PRACTICAL FOR EVERYDAY USE THANKS TO ITS COMPACT DESIGN

The Life S is compact, yet perfectly suited to everyday use. It's ideal for city riding, commuting, shopping, leisure and short trips. The 'one size fits all' approach makes it an attractive option for households with several users and simplifies the advice-giving process in specialist shops. Wide comfort tyres, a sturdy centre stand, accessory mounts and a luggage rack provide plenty of space for a bag, basket, shopping, a child seat or panniers.

GREATER STABILITY THANKS TO THE FRAME PLATFORM AND DETAILED DESIGN

The Life S also demonstrates corratedec's frame expertise in its functionality. The double-chamber down tube ensures high stiffness and neat cable routing. Flexible dropouts allow for a range of drivetrain options, such as belt drives, derailleur gears, Nexus or Enviolo. For retailers, this means that the Life S is not just any compact bike platform, but is designed with stability, versatility and everyday use in mind.

GREATER PRACTICALITY THANKS TO THE LUGGAGE RACK AND BRAKE LIGHT

A major highlight is the specially developed four-point luggage rack. It transfers the weight of a basket, shopping, child seat or panniers to the frame in a controlled manner. With MIK-HD load capacity, versatile accessories and a large rear light with brake light function, the Life S is a genuine everyday solution: stable when stationary, secure when carrying luggage, visible when braking and flexible in terms of accessories.

Our Promise

As a family-run business based in Raubling at the foot of the Alps, corrateg combines development, design, testing and brand ethos all under one roof. The trails around the Bavarian Alpine foothills are more than just a backdrop: they serve as a testing ground. What is put through its paces there on steep climbs, fast descents, gravel tracks, trails, commuter routes and everyday routes must also be clearly understood, experienced and convincingly communicated in the shop.

For us, one point is crucial: corrateg remains a brand for specialist high-street retailers – and thus a reliable partner for everyone who not only sells bikes but also advises people on finding the right one for them. Our bikes should be explained, fitted, test-ridden and supported with a focus on service. Precisely because many customers have long been comparing technical specifications online, retailers need selling points that go deeper:

- frame construction rather than a mere comparison of components,
- geometry rather than marketing claims,
- practical value rather than a list of features.

That is what this cycling pioneer from Upper Bavaria stands for.

True strength comes from balance –

from the interplay of mind, body and soul. That is exactly what corrateg stands for.

As the only bicycle manufacturer from Bavaria, we embody our homeland in every detail: innovative spirit, precision and a deep connection to the mountains and nature.

POWER FOR MIND, BODY & SOUL

is our commitment to uniting technology, performance and emotion.

For us,

Mind: means having the courage to think outside the box.

Body: uncompromising performance on any terrain.

Soul: the passion that makes every ride special.

[As a retailer, you bring precisely these values to people.
Together, we turn cycling into a real experience.]
